Known Information : age > 40 , income = low .

Asked : $P(\text{Buy?} \mid \text{age} > 40, \text{income} = \text{high})$

Solⁿ :

$$\rightarrow P(C_i) \Rightarrow P(\text{buy computer} = \text{"yes"}) = \frac{9}{14}$$

$$P(\text{buy computer} = \text{"no"}) = \frac{5}{14}$$

$$\rightarrow P(X \mid C_i)$$

$$P(\text{age} > 40 \mid \text{buy} = \text{yes}) = \frac{3}{9}$$

$$P(\text{age} > 40 \mid \text{buy} = \text{no}) = \frac{2}{5}$$

$$P(\text{low} \mid \text{buy} = \text{yes}) = \frac{3}{9}$$

$$P(\text{low} \mid \text{buy} = \text{no}) = \frac{1}{5}$$

$$P(X \mid \text{buy} = \text{yes}) = \frac{3}{9} \cdot \frac{3}{9} = \frac{9}{81} = \frac{1}{9}$$

$$P(X \mid \text{buy} = \text{no}) = \frac{2}{5} \cdot \frac{1}{5} = \frac{2}{25}$$

$$P(X \mid C_i) * P(C_i) = P(X \mid \text{buy} = \text{yes}) * P(\text{buy} = \text{yes})$$

$$= \frac{1}{9} \cdot \frac{9}{14} = \frac{1}{14}$$

$$P(X \mid C_i) * P(C_i) = P(X \mid \text{buy} = \text{no}) * P(\text{buy} = \text{no})$$

$$= \frac{2}{25} \cdot \frac{5}{14} = \frac{2}{70} = \frac{1}{35}$$
